Skills

Languages	Python, PySpark, R, SQL, Unix/Linux, Git, Regex, Stan
Machine Learning	Supervised, unsupervised & deep learning, hierarchical & generalized linear regression, time series modeling & forecasting, tree models, simulation, classification, feature engineering & selection
Statistics	A/B Testing, probability, likelihood, inference
Tools	<i>agentic platforms</i> : CoPilot, Antigravity, <i>coding frameworks</i> : Pandas, NumPy, Scikit-learn, R-Studio, Tidyverse, Caret, LME4, RStan, <i>web-dev</i> : HTML, CSS, AWS, Flask, <i>data-vis</i> : GGPlot2, Matplotlib, Seaborn, R-Shiny

Experience

2019–26 **Starbucks Coffee Co.**, Seattle WA, USA

Data Scientist Lead (2025–2026) · Data Scientist Sr. (2021–2025) · Data Scientist (2019–2021)

- **Product Leadership & Financial Impact**: Served as **product owner** and **technical lead** of the replenishment algorithm optimizing future orders for 10,000+ North American stores, resulting in the discovery of **60-\$100M** in additional annualized **profit** and providing accurate projections that supported labor, warehouse and logistics planning.
- **Architectural & Performance Leadership**: Led a team of globally dispersed technical talent to **modularize** algorithm models, orchestrate cost-efficient, resilient and SLA reliable **DAGs**, and ensure safe, secure and high-velocity **CICD** pipelines.
- **Technical Deliverables (IC)**:
 - **Scheduling-Model**: Developed the **algorithmic specifications** for optimizing product bake-schedules as a sub-process to daily orders by combining a sub-daily **hierarchical mixed effects** demand forecast, rolling **News vendor** inventory optimization, and shelf-life uncertainty model.
 - **Inventory-Model**: Developed and deployed a fully distributed unsupervised **Bayesian state-space** inventory-estimation model; containing a bespoke **Monte Carlo** approximation **particle filter algorithm**, crucial to managing multi-modal inventory-count errors that otherwise made fully autonomous ordering impossible.

2019 **Data Science Consultant**, Seattle WA, USA

- Built an **Economic Order Quantity** model as a stochastic consumption **Bayesian Structural Time Series** to estimate re-order points with respect to the probability of stock-out for Y-Combinator start-up, Bottomless.

2019 **Insight Data Science Fellow**, Seattle WA, USA

- Built an end-to-end **interactive recommender** that aggregates multi-database metadata and decomposes **1400+** scraped plant images into 512 features using the **convolutional neural network** ResNet18 in **PyTorch** to recommend native plants based on user aesthetic tastes.

2013-19 **Research Assistant**, Simon Fraser University, Burnaby BC, Canada

- Automated error identification in time series data using a **Bayesian Hidden Markov model** with 84% accuracy across **1 Million+** records. Significantly reduced human work hours, and earned the SFU KEY Big Data Graduate Scholarship.
 - Identified novel river-network properties using **linear regression**, **simulations**, **ARIMA** processes and **parametric bootstrapping**. Achieved 98% certainty.
 - Used **periodic time series** and **generalized hierarchical spatial network models** to determine stream temperature drivers and assess salmon heat risk.
-

Education

Ph.D. Biological Sciences	Simon Fraser University, Burnaby BC, Canada	2019
M.Sc. Conservation Biology	University of Minnesota, St. Paul MN, USA	2013
B.A. Biology	St. Olaf College, Northfield MN, USA	2009
